Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-6 and 9-19 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification is silent as to polyester based resins with a glass transition temperature of 25 degrees Celsius or below in combination with the other elements in the claim. The specification on page 6, line 1 states that dielectrics with a glass transition temperature of 25 degrees Celsius or below produced no cracks, and later on page 6, line 15, stated that a dielectric could be polyester but failed to disclose "polyester based resins". Similarly on pages 11-13, the specification lists examples of polyester based resins ranging from 89 to -29 degrees Celsius but fails to show any temperature less than -29 degrees or the range from 25 to below except for the specific examples. Thus, the specification is silent as to polyester based resins below -29 degrees and temperatures in between the specific examples.
3. Regarding claim 2, the specification is further silent as to the polyester based resin having a thickness from between 0.5 micrometers to 100 micrometers. There is no support for the whole range of thicknesses.

4. Regarding claims 6, 15-18, the specification is also silent as to the polyester based resins being bent from between 90 degrees to 270 degrees. There is no support for the whole range of angles.
